## MODULAR IS SUSTAINABLE

### Dwyer Products Corporation Maximizes the Advance Benefits of Reuse

**WOOD DALE, IL. (April 2010)** –[Dwyer Products Corporation](http://www.dwyerproducts.com) is pleased to unveil Goelst® by Dwyer modular medical casework line. By manufacturing durable, reconfigurable and reusable casework, the product line supports its customers' bottom line by being less disruptive to install and staying in service longer than traditional millwork.

Goelst by Dwyer offers acute care facilities top-of-the line casework designed for long-term solutions. With an industry-leading 10-year parts and labor warranty, the products offer worry free service for more than twice the expected lifetime of built in furniture.

Unlike traditional millwork, facility operators no longer have to tear down and throw out casework when remodeling or updating their spaces, now they need only take their existing casework and repurpose or add additional products that mirror existing products as needed. With 50,000+ models available, Goelst by Dwyer addresses the need for flexible facility design.

"We understand acute care facilities are 24/7 environments," said Clay Jacobs, president of Dwyer Products Corp. "Their furniture and casework systems need to be highly versatile. Operating rooms and Labs are constantly being reconfigured and other areas are regularly repurposed due to the changing needs of patients and staff. That's why our products are developed to be reconfigured or expanded to adjust to their ever changing workflow."

"Think about your car, you don't throw out the entire vehicle when you need to replace a tire. It's exactly the same when it comes to changing health care environments," Jacobs continued, "Modular is sustainable because you have to consider the long-term impact of products. A built-in version that has to be completely replaced every few years will actually be more disruptive to work flow and accrue more expenses over time. A durable, functional product that is able to be repurposed is the truly sustainable alternative. After all isn't the ultimate in "green" keeping products out of landfills?"

Additionally, most of Dwyer's modular cabinetry and casework is GREENGUARD Indoor Air Quality Certified®, further supporting the company's mission to increase sustainability and bolster client's assets. By reusing the Goelst and Dwyer line of modular casework operators can prevent the waste of natural resources while extending the value of their investments.

To learn more about the Dwyer Products Corporation's complete line of products call 1-800-822-0092. For information specific to the Goelst brand please call 1-877-4GOELST (1-877-446-3578).

#### **About Dwyer Products:**

For more than 90 years, Dwyer has provided flexible, high-quality kitchen solutions that make the most of small spaces. Dwyer supplies a wide array of casework, nourishment stations and full-service kitchens that are KCMA and GREENGUARD Indoor Air Quality Certified®. The company offers configurations designed to meet the needs of the healthcare, student housing, assisted living, military and public housing markets. Dwyer is also the exclusive licensee in the US and Canada for Goelst by Dwyer medical casework, a complete line of modular casework designed specifically for acute care facilities.
